August 24, 2006

To Whom it May Concern:

This letter is written on behalf of the Help Me 2 Learn educational multimedia products including: Letters and Numbers; Phonics 1a and 1b; Phonics 2; Phonics 3a and 3b; and Spanish 1a with Phonics.

At the outset I would like to express my thanks to Dan Sheffield and the Help Me 2 Learn Company for the planning, development and delivery of first rate educational software of the highest caliber.

I am a speech pathologist working in a multi-disciplinary clinic that offers Developmental Pediatrics, Psychiatry, Psychology, and Speech Pathology treatment, and Physical and Occupational therapies to a diverse population of individuals with varying diagnoses and ranging in age from birth through young adulthood.

In addition our clinic is a center of excellence for the diagnosis and treatment of individuals with Autism Spectrum Disorder. This particular population make up the majority of my patient load. The children, from least to most competent, are able to use some or all aspects of the programs.

Technological advantages of the programs include easy installation, reliable operation every time opened, excellent documentation (User's Manual, Warranty, Reprintable Worksheets), definitive opening, running and closing screens, superb child-friendly instructions for each activity, and child-like or friendly adult "characters" that children can easily relate to.

The approach of each program is skills/outcomes/best practices-based, curriculum related, sequenced in order of complexity and, can be individualized for multiple learners. The thematic formats are appealing to children and the "reward" system offers developmentally appropriate motivation and positive feedback.

This complete software package provides me with state of the art software to augment and enhance more traditional speech pathology service delivery techniques and approaches. For the amount of product activities available this software is very modestly priced. I hope the company will continue to build on and deliver more of this outstanding software for both home and professional use.

I would recommend without reservation all of the Help Me 2 Learn products for their competency-based, highly interactive and teacher or learner-controlled scope. Given their appropriate sociolinguistic accuracy, they provide an excellent source for targeting literacy concomitant with more traditional instructional approaches.

Sincerely,
Susan M. Hock
