August 20, 2006

Dear Mr. Sheffield,

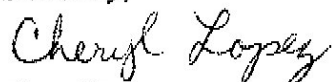

I have used "Phonics Super Star Reading System" software in my classroom for the past 6 years with great success! I was so excited to receive the latest Phonics software (2b) in time for this new school year! The first software I used in my classroom was Letters and Numbers. I was amazed by how motivated and successful my students were with these programs. I was always searching for educational software that would academically help meet the individual needs of my Learning Disabled and Autistic students. I hit the jackpot when I found Help Me 2 Learn-"Phonics Super Star" software. I now have all 8 of the "Phonic Super Star Reading System" and use them daily in my class.

These programs are great as they allow the students to work at their own pace and level. It is wonderful to see them be successful instead of struggling to learn. The students are motivated and excited to work with the software, especially when they earned a gold or silver star. The students cheer as their gold star appears on the screen, followed by them calling me over to the computer to show me their latest accomplishments.

Skills presented in each program parallels the State Standards and emphasize the same skills as in our reading program "Open Court". Often I use the program for direct instruction, intervention, pre-teach, re-teach, guided instruction, independent learning, and bonus computer time. Another valuable feature is the data and reporting components of the programs, which documents each student's progress.

Overall, "Phonics Super Star Reading System" software is a valuable teaching tool for my students!! I know my students will be very excited when I tell them we have the new "Phonics 2b" program to work on this year. I can already see their smiles! Thanks in advance for another great year! The students and I will be eagerly waiting for the next "Phonics Super Star Reading System" software to be released!

Sincerely,

Cheryl Lopez
